

WARBLER

Audit Summary

In this audit we focused on `Go.sol` and its dependencies. The change was to allow calls where `tx.origin` holds a UID but `msg.sender` doesn't, opening up the protocol to re-entrancy or chains of calls in a single tx. Therefore, re-entrancy was a focus area.

Issue Count

Two low impact issues were found, both unrelated to the Go changes.

Contract				Total
All	0	0	2	2
TranchedPool.sol	0	0	2	2
