## Pool Token Splitting Audit 01/26/23

---

Auditors: [Carter](#)

### Overview

Pool Token Splitting is a new feature to allow participants to split their pool tokens into two new, differently sized pool tokens. This enables more complex protocol features.

### Scope

The audit's focus is on these contracts

- PoolTokens.sol
- BackerRewards.sol

### Summary of findings

Nothing serious found.

There is a future risk if a maintainer changes `_mint` to `_safeMint`. This is called out in the PoolTokens contract sub-audit.
